In Stage SPECIFICITY: Ubjectious: Expressed prior to callularization in stage 3 embryos, and in blastoderm cells, including pole cells. Expressed throughout the rest of embryogenesis. Later, it is expressed at higher level in epidermal cells and CNS.
DEVELOPMENTAL STAGE: Isoform 3 is expressed both maternally and
                                                                                                                                                                                                                                                      Development 130:3125-3135 (2003).

-I- FUNCTION: Probable corepressor protein, which regulates different key pathways such as the EGF receptor and wig pathways. Involved in neuronal cell fate, survival and axon guidance, cell cycle regulation and repression of head identity in the embryonic trunk. May act with the Hox gene Deformed and the EGF receptor signaling pathway. Positive regulator of the Wig pathway in larval tissues but not in embryonic tissues. May act as a transcriptional corepressor protein, which repress transcription via the recruitment of large complexes containing histone deacetylase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     οŧ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 zygotically.
--- SIMILARITY: Belongs to the Spen family.
--- SIMILARITY: Contains 3 RNA recognition motif (RRM) domains.
--- SIMILARITY: Contains 1 SPOC domain.
--- CAUTION: It is uncertain whether Met-1 or Met-7 is the initiator.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the Buropean Bioinformatics institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
regulator of the Notch pathway via its interaction with RBPSUH, which prevents the association between NOTCH1 and RBPSUH, and therefore suppresses the transactivation activity of Notch signaling. Blocks the differentiation of precursor B cells into marginal zone B cells. Probably represses transcription via the recruitment of large complexes containing histone deacetylase proteins. May bind both to DNA and RNA.

-!- SUBUNIT: Interacts with the nuclear receptors RAR and PPARD interacts with RAR in absence of ligand. Bind to the steroid receptor RNA coactivator SNA (By similarity). Interacts with MSX2. Interacts with RBPSUH; this interaction may prevent the interacts with RBPSUH and NOTCH1.

-!- SUBCELLULAR LOCATION: Nuclear. Associates with chromatin.

-!- ALTERNATIVE PRODUCTS:

Event-Alternative splicing; Named isoforms-2;
                                                                                                                                                                                                                                                                                                                                                                                                        Isode 262504-2; Sequence - VSP 008564;
Isode 262504-2; Sequence - VSP 008564;
Note = No experimental confirmation available;
Note = No experimental confirmation available;
TISSUE SPECIFICITY: Highly expressed in testis. Expressed at lower level in brain, lung, spleen, liver and kidney. Weakly expressed in cardiac and skeletal muscles and ovary. In spleen, it is spressed in follicular B-cells, while it is weakly expressed in marginal zone B-cells.
DOMAIN: The RID domain mediates the interaction with nuclear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -. DOMAIN: The SPOC domain, which mediates the interaction with NCOR2, is essential for the repressive activity (By similarity).
-!- SIMILARITY: Belongs to the Spen family.
-!- SIMILARITY: Contains 1 RID (receptor interacting) domain.
-!- SIMILARITY: Contains 1 RPOC domain.
-!- SIMILARITY: Contains 1 SPOC domain.
-!- SIMILARITY: Contains 1 SPOC domain.
-!- CAUTION: Ref.4 sequence differs from that shown due to multiple frameshifts and conflicts that create stop codons.
-!- CAUTION: Ref.5 sequence differs from that shown due to what seems to be the presence of intronic sequence in the cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MGD; MGI:1891706; Mint.

"Brain-specific expression of human microtubule-associated protein 1A
"Brain-specific expression of human chromosome 15.";

(MAPLA) gene and its assignment to human chromosome 15.";

J. Neurosci. Res. 40.820-825(1995).

-!- FUNCTION: Structural protein involved in the filamentous cross-bridging between microtubules and other skeletal elements.

-!- SUBUNIT: 3 different light chains, LC1, LC2 and LC3, can associate with MAPLA and MAPLA proteins.

-!- TISSUE SPECIFICITY: Brain.
                                                                                                                                                                                                                                                                                                                       DOMAIN: The basic region containing the repeats may be responsible for the bhinding of MAPIA to microtubules.

FITH: Various serine residues may be phosphorylated by CAMP kinase. PTM: LC2 IS COEXPRESSED WITH MAPIA. IT IS A POLYPEPTIDE GENERATED FORM MAPIA BY PROTEOLYTIC PROCESSING. IT IS FREE TO ASSOCIATE WITH SIMILARITY: TO MAPIB.
                         Ohtani K., Rutherford T., Sakamoto H., Naftolin F.; "Microtubule associated protein 1A (MAPIA) in human brain sequence and physiological role."; Submitted (NOV-1996) to the BMBL/denBank/DDBJ databases.

-: TISSUE SPECIFICITY: Plasma membrane of neurons as well as glial cells throughout the brain.
-: PTM: Phosphorylated at multiple sites by different protein kinases and each phosphorylation event regulates the protein's structure and function (Potential):
-: SIMILARITY: Contains 13 ANK repeats.
-: SIMILARITY: Contains 1 death domain.
                                                                                                                                                                                                                                                                                                                                 TISSUE=Brain stem,

Submitted (FEB-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: May act as a scaffolding protein involved in the organization of synaptic active zones and in synaptic vesicle trafficking (By similarity).
-!- SUBMIT: Interacts with Rabacl/Pral, RIMS2 and profilin (By similarity).
-!- SUBCELLULAR LOCATION: Concentrated at the presynaptic side of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isold=09%6V0-2; Sequence=VSP_003923, VSP_003925, VSP_003925, VSP_003925, VSP_003925,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Note=No experimental confirmation available;
-!- DOMAIN: C2 domain 1 is involved in binding calcium and phospholipids. Calcium binds with low affinity but with high specificity and induces a large conformational change.
-!- SIMILARITY: Contains 2 C2 domains.
-!- SIMILARITY: Contains 1 PDZ/DHR domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        synaptic junctions (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TISSUE SPECIFICITY: Highly expressed in testis and ovary, followed by brain and liver. Also expressed in placenta, peripherical blood, fetal thymus, heart, lung and kidney, within brain, expression was highest in hippocampus, caudate nucleus, and expression was highest in hippocampus, caudate nucleus, and substantia nigra. Not detected in skeletal muscle and fetal liver. DOMAIN: The SET domain interacts with histone H3 but not H2A, H2B and H4, and may have a H3 lyaine specific methylation activity.

-!- DOMAIN: The SET domain interacts with histone H3 but not H2A, H2B and H4, and may have a H3 lyaine specific methylation activity.

-!- MISCELLANEOUS: Found in a critical region of chromosome 7, which is commonly deleted in malignant myeloid disorders. Partial duplication of the MLi3 gene are found in the juxtacentromeric region of chromosomes 1, 2, 13 and 21. Juxtacentromeric region of chromosomes 1, 2, 13 and 21. Juxtacentromeric region of chromosomes 1, 2, 13 and 21. Juxtacentromeric region of chromosomes 1, 2, 13 and 21. SIMILARITY: Contains 1 DHHC-type zinc finger.
-!- SIMILARITY: Contains 1 RING-type zinc finger.
-!- SIMILARITY: Contains 1 RING-type zinc finger.
-!- SIMILARITY: Contains 1 SET domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright. the coling protein from clone DP2.5. The gene for the protein is present on thuman chromosome 5q21 and is also referred to as adenomatous polyposis colingene. It is a tumour suppressor gene, and mutations in this gene that be associated with tumourigenesis in retinoblatome and colorectal tumours, and especially familial adenomatous polyposis (FAP) and colorectal colorectal protein and the nucleic acids can be used in therapy. The nucleic acids that encode them can also be used as probes and primers in detection of the cancers and predisposition to it. (Updated on 25-MAR-2003 to correct PR field.) This sequence represents a human familial adenomatous polyposis coli (APC) protein isolated from 87 cDNA clones. The gene for the protein is present on human chromosome 5q21 and is also referred to as adenomatous polyposis coli gene. It is a tumour suppressor gene, and mutations in this gene have been associated with tumourigenesis in retinoblastoma and colorectal tumours, and especially familial adenomatous polyposis (FAP) and Gardner's Syndrome (GS). The protein can be used in therapy to replace lack of native functional protein and the nucleic acids can be used for gene therapy. The nucleic acids that encode them can also be used as probes and primers in detection of the cancers and predisposition to it. (Updated on 25-MAR-2003 to correct PR field.)
                                     Familial adenomatous polyposis coli, APC, tumour suppressor, therapy, chromosome 5q21, tumourigenesis, retinoblastoma, colorectal tumour, FAP, Gardner's Syndrome, GS; predisposition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MAAASYDQLLKQVEALKMENSNLRQELEDNSNHLTKLETEASNMKEVLKQLQGSIEDEAM

The invention relates to a novel method for detecting Adenomatous

C Polyposis Coli (APC) protein in a sample. The method involves contacting

the sample with antibodies which specifically binds to the 2843 amino

acid form of the human APC protein, or to a mutant APC protein, and

detecting an APC-antibody complex. Mutations in the APC grane play a role

c in tumoridenesis, indicating that it is a tumour suppressor gene. It is

located on chromosome 5q21, which corresponds to the PAP (familial)

adenomatous polyposis) locus. FAP is an autosomal dominant inherited

disease in which affected individuals develop hundreds to thousands of

adenomatous polyps in the colon and rectum, some of which progress to

calenomatous polyps in the colon and rectum, some of which proragress to

calenomatous polyps in the colon and rectum, some of which proragress to

calenomatous polyps in the colon and rectum, some of which proragress to

calenomatous polyps in the colon and rectum, some of which proragress to

complement and the FAP locus is often found to be deleted in sporadic (i.e.,

colon-familial) adenomas and carcinomas, and chromosome 5q deletions have

also been observed in tumours of the lump, breast, colon, rectum,

chalder, liver, sarcomas, stomach, and prostate, and in leukaemias and

colon-familial adenomas stomach, and prostate, and in leukaemias and

colon-familial adversion to the prognosing or prognosing or prognosing or prognosing or prognosing or prognosing or prognosing or prognosing or prognosing or prognosing or prognosing neoplastic tissue,

conatic alteration of wild-type APC genes, and for testing therapeutic

detecting a genetic predisposition to cancer, for detecting germine and

contact alteration of wild-type APC genes, and for testing therapeutic

capants for the ability to suppress tumours. The present sequence

cerpresents a 2843 amino acid splice variant of the human APC protein.

This variant is more abundant than the 2742 amino acid variant (AAB23012) 120 120 240 300 300 360 360 420 HGNDKDSVLLGNSKGSKEARARASAALHNIIHSQPDDKRGRREIRVLHLLEQIRAYCETC 420 09 9 Detecting Adenomatous Polypopsis Coli (APC) protein in a sample for diagnosing cancers, involves contacting the sample with antibodies that specifically bind to APC protein and detecting the complex formed. 61 ASSGQIDLIERLKELNLDSSNFPGVKLRSKMSLRSYGSREGSVSRSGECSPVPMGSFPR 1 MAAASYDQLLKQVBALKMENSNLRQELBDNSNHLTKLBTBASNMKEVLKQLQGSIBDBAM 61 ASSGQIDLLERLKELNLDSSNFPGVKLRSKMSLRSYGSREGSVSSRSGECSPVPMGSFPR 181 QIDMIRRQLEYEARQIRVAMEEQLGTCQDMEKRAQRRIARIQQIEKDILRIRQLLQSQAT BAERSSQNKHETGSHDAERQNEGGGVGEINWATSGNGQGSTTRMDHETASVLSSSSTHSA EAERSSQNKHETGSHDAERQNEGQGVGEINMATSGNGGGSTTRMDHETASVLSSSSTHSA PRRLISHLGTKVEMVYSLLSMLGTHDKDDMSRTLLAMSSSQDSCISMRQSGCLPLLIQLL PRRITSHLGTKVEMVYSLLSMLGTHDKDDMSRTLLAMSSSQDSCISMRQSGCLPLLIQLL 1 MAAASYDQLLKQVEALKMENSNLRQELEDNSNHLTKLETEASNMKEVLKQLQGSIEDEAM RGFVNGSRESTGYLEELEKERSLILLADLDKEEKEKDWYYAQLQNLTKRIDSLPLTENFSL QTDMTRRQLEYEARQIRVAMEEQLGTCQDMEKRAQRRIARIQQIEXDILRIRQLLQSQAT HGNDKDSVLLGNSRGSKEARARASAALHNIIHSQPDDKRGRREIRVLHLLEQIRAYCETC Gaps Length 2843; ; 0 0; Indels DB 3; Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a transgenic Drosophila whose genome comprises the full-length human colon cancer gene Adenomatous Polyposis Coli (APC) allowing regulated mis-expression of the APC gene resulting in developmental abnormalities. The transgenic files are used to screen and validate efficacy of anticancer drugs, to identify new target proceins interacting with beta-catenin, genes which interact with human APC, to study the biochemical function of human APC and to identify additional components of the Drosophila Wht/Wg signalling pathway. In particular the files are used to screen potential drugs against colon cancer. This is the amino acid sequence of the human adenomatous polyposis coli (APC) protein DNA encoding which is incorporated in the transgenic flies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

cancer

developing

This sequence represents a human APC protein which is used in a method of identifying candidate drugs for use in familial adenomatous polyposis (FAP) patients, or patients with increased risk of developing cancer. The protein can also be used to determine the presence or absence in a cell of wild type adenomatous polyposis coli (APC) gene or a downstream protein in the APC transcription regulatory pathway. This method involves introducing a Tcf-responsive reporter gene into the cell, and measuring transcription of the reporter gene does not have wild type APC or a downstream protein of the APC transcription regulatory pathway. The construction of the APC transcription regulatory pathway. The construction of the APC transcription regulatory pathway. The construction of the APC transcription regulatory pathway. The construction of being neoplastic and for treating a patient with colorectal cancer or other cancers associated with FAP, comprising administering to the patient a polypeptide comprising a portion of the APC sequence, comprising the beta-catenin binding site Disclosure; Page 32-37; 58pp; English.

The present sequence is a transcriptional activation protein related to the invention. The invention relates to human Tcf-4 proteins and their corresponding cDNA molecules which encodes transcriptional activation of factors of human Tcf/Lef family. Human Tcf-4 binds to beta-catenin and activates transcription in colorecal epithelial cells. Moreover it has been found that adenomatus polyposis coli (APC) regulates this conscriptional activation, by binding to beta-catenin. The invention also provides a recombinant adenovirus, Ad-Mini-Me ie., APC Minus its amino- and carboxyl -terminal Ends which expresses a fusion protein, cypen fluorescent protein (GPP)/CAPC containing GFP fused to the central cyphich contains its beta-catenin binding domain useful for third of APC which contains its beta-catenin binding domain useful for treating calcaer, e.g. colorectal cancer, and other cancers associated with Familial Adenomatous Polyposis (FAP) or patients with increased risk of developing cancer. Human Tcf-4 cDNA provides an excellent system for screening agents for their ability to promote cellivery, integration, hybridization, expression, replication or integration in cells or in a nample suspected of being neoplastic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             121 RGFVNGSRESTGYLEELEKERSLLLADLDKEEKEKDWYYAQLQNLTKRIDSLPLTENFSL 180

                                   The present sequence is a protein involved in cancer diagnosis associated with APC or beta-catenin mutations. Human Tcf-4E protein expressed in colorectal epithelium transactivates transcription when associated with beta-catenin. Adenomatous polyposis coli (APC) regulates this transcriptional activation, at least in part by binding to beta-catenin. Determining wild-type APC protein for diagnosing cancer comprises introducing a Tcf responsive reporter gene having upstream sequences of a Tcf responsive reporter gene having upstream sequences of a Tcf into a cell and measuring transcription of the reporter gene. The candidate drug identified is useful for treating familial adenomatous polyposis patients with APC or beta-catenin mutations and patients with increased risk of developing cancers such as colorectal, thyroid, brain, medulloblastoma, desmoid tumour, osteoma, breast, head and neck
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     540
